2. Palm Oil and Certified Sustainable Palm Oil Consumption

Information in Section 2 - Palm Oil and Certified Sustainable Palm Oil Consumption - is a mandatory declaration in your ACOP. This includes volume data on palm oil and palm oil products consumed, to enable the RSPO to accurately calculate uptake on a member, sector and total level. ACOP reports without reported volume data will be considered incomplete and will not be accepted.

2.1 Please list down all operations and subsidiaries using palm oil that are owned and/or managed by the member, including those under Group Membership

Persano Group A/S

| Total volume of palm oil/palm kernel oil derivatives and fractions (tonnes) | 587.0 |
| Total | 587.0 |

2.2.6 Please estimate the percentage of derivatives and fractions (reported in Question CG.2.2.4) derived from palm oil or from palm kernel oil. The default split for volumes is assumed to be 80% palm oil-based derivatives and 20% palm kernel oil-based derivatives.

| Description | Percentage |

| Palm oil-based derivatives and fractions | 54.0 |
| Palm kernel oil-based derivatives and fractions | 46.0 |

| Description | Crude/Refined Palm Oil (CSPO) | Crude/Refined Palm Kernel Oil (CSPKO) | Palm Kernel Expeller (CSPKE) | Certified Derivatives and Fractions |

| Certified Palm kernel oil-based derivatives and fractions | 21.0 |

2.4 According to the volume information you have provided in Question 2.2 and Question 2.3, your company's certified palm oil and palm oil products uptake is:

48.55%

2.4.1 If your company has not reached 100% usage of sustainable palm oil through the four supply chain models (RSPO Credits, MB, SG or IP), do you have any plans to cover the gap using RSPO Credits?

No

2.4.2 Please explain why you do not intend to cover the gap using RSPO Credits

The RSPO MB certified coverage for our company is estimated to be higher than 48,55 %. The reason is the following (among others): 1) Some of our MB-ingredient suppliers are certified according to an old version of the RSPO SCCS, not requiring separation of PO and PKO values. We can not monitor these informations in our system, build to track PO and PKO separately. In these cases, we can not implement the ingredient into our MB calculation system and therefore our system does not give us the "credit" of buying these MB certified ingredients. Instead, they are being calculated as non-certified and furthermore, the value is calculated twice (once for PO and once for PKO, as worst case (and so it seems that we buy larger volumes of non-certified/total PO/PKO than we actually do)). 2) Some of our non-certified ingredient-suppliers are not able to estimate the correct content of PO/PKO in their ingredient. We use worst case values and in cases where the PO and PKO are not estimated separately, the worst case value is calculated twice (once for each of the PO and PKO categories). We expect, that the technical problems given in 1) and 2) will solve themselves in the future, when more and more suppliers follow the current RSPO SCCS. With regards to reaching 100 %. Regarding question CG.2.5: We do not have this overview of the origin of the palm used in the ingredients we buy. However, we mainly buy from European distributors/ingredient manufacturers.

2.5 Please estimate the regional distribution of your company's RSPO certified palm oil and palm oil-products usage (as declared in Question CG.2.3) in the following countries/regions:

| Countries/Regions | Percentage |
|--------------------------|-------------------|
| Europe | 100.0 |
| North America | 0.0 |
| Malaysia | 0.0 |
| Indonesia | 0.0 |
| China | 0.0 |
| India | 0.0 |
| Latin America | 0.0 |
| Africa | 0.0 |
| Rest of World | 0.0 |
